

"Nine out of ten (93%) adults want e-mail communication with their doctor"

- Catalyst Healthcare Research, May 2014

Secure E-mail for Healthcare

Innovative Technology

ChiaraMail is introducing a new award-winning technology for the healthcare industry that ensures e-mail privacy between you and your patients and between you and other providers. Send a message with sensitive health information that only the intended recipients can see. Not the mail providers, cyber criminals or even the NSA.

This patented technology is called Envelope-Content Splitting® (ECS) and it also **eliminates spoofing so when your customers click on your e-mail, they are assured that it is really from you.**

ECS technology works as an extension or plug-in to what you, your patients or your partners already use for e-mail or as a standalone e-mail application.

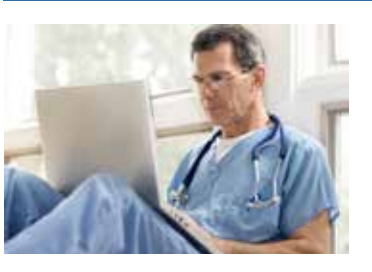

Healthcare Communications for the 21st century

Secure provider to patient, and provider to provider e-mail

Create a better patient, doctor and vendor experience while ensuring the highest level of privacy. With ChiaraMail ECS technology, you can provide a direct and secure e-mail connection between doctors and their patients and between healthcare providers. In addition, files of virtually unlimited size including x-ray and MRI images can be shared with your healthcare partners and patients via e-mail without burdening their in-boxes or your network. Increase patient and doctor satisfaction while creating more efficient communications.

Envelope-Content Splitting® (ECS) Technology

ECS technology splits off the mail envelope (header) from the content. Only the envelope, is sent through the mail network, while the message content, including any attachments, is sent to a content server that resides outside of the mail network via a secure link. Thus, message content is unavailable to mail intermediaries and in-transit privacy is automatic, requiring no encryption. For in-storage protection the content can easily be encrypted, if desired.

Unprecedented Privacy

Spoofing eliminated

Use existing e-mail accounts

No content size limits

Change content after sending

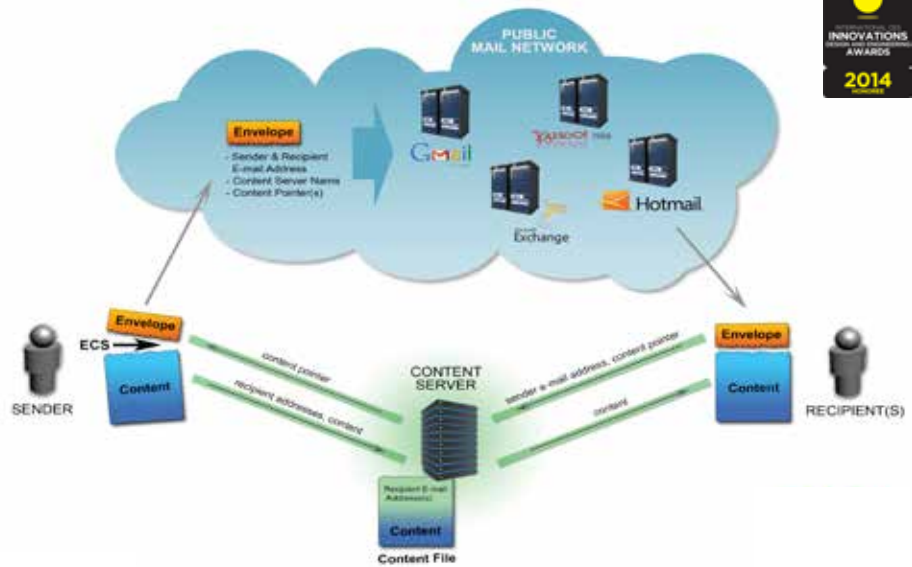

HIPAA compliant

Optional endpoint encryption

Decreased in-box storage

Increased network efficiency

ENVELOPE-CONTENT SPLITTING® (ECS) TECHNOLOGY Secure Communications Without Encryption

Compatible

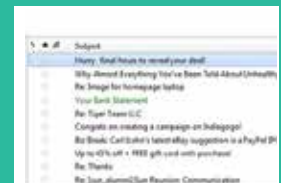

ChiaraMail ECS technology can be easily plugged into popular desktop or mobile mail applications, added as a browser extension for web mail or used within a stand-alone, full featured e-mail application for mobile devices.

Easy to Install

ECS Installation is easy and costs nothing. No trial periods or hidden costs. Your care providers, partners and patients simply install and start their new secure e-mail experience within minutes.

Easy to Use

Your patients and providers have nothing new to learn. Simple colors indicate if the e-mail is secure and a click of a button is all they need to use to send a private e-mail back to you.
